myFinance — Executive Wealth & Cashflow Forecasting Suite

A modular, local-first personal finance web application designed for **GitHub Pages** hosting. Built with compartmentalized HTML, CSS, and JavaScript modules, interactive **Chart.js** visualizations, **SheetJS (`.xlsx`)** Excel backup/restore, **Android Home Screen / PC Bookmark Icons**, and a live **Run-Time Log & Error Diagnostics Console**.

Compartmentalized File Architecture

- `index.html` — Application shell, unnumbered segmented navigation bar, Balance Sheet & Cashflow Forecast views, and PC/Android/iOS icon & Web App Manifest links.
- `styles.css` — Executive fintech design system, custom scrollbars, animations, and responsive surface styling.
- `logger.js` — Run-Time Log & Error Diagnostics module capturing lifecycle events, calculation audits, and uncaught exceptions.
- `storage.js` — Local device persistence (`localStorage`) and multi-sheet Excel (`.xlsx`) export/import module.
- `charts.js` — Interactive Chart.js visualizations for asset allocation, balance sheet structure, passive yields, and retirement wealth trajectories.
- `balanceSheet.js` — Assets (Liquid / Fixed, Productive flag & Yearly Return Rate), Liabilities (Short-Term / Long-Term), Net Worth, and 6 Financial Health Ratios.
- `cashflow.js` — Yearly Cashflows & Forecast engine from Current Age to Life Expectancy, including **Initial Savings** (after Current Age) and one-time **Expected Pension (Lump Sum)** (after Target Retirement Age).
- `app.js` — Main application controller coordinating tabs, modals, toast notifications, and module initialization.
- `favicon.svg` — Scalable vector page icon for modern PC browsers (Chrome, Edge, Firefox, Safari) and high-DPI bookmarks.
- `favicon.ico` & `favicon-32x32.png` — Multi-resolution legacy & desktop bookmark icons for Windows/macOS browsers.
- `icon-192.png` & `icon-512.png` — High-resolution Android home screen shortcut icons (`192×192` and `512×512` PNG).
- `apple-touch-icon.png` — iOS / iPadOS home screen shortcut icon (`180×180` PNG).
- `site.webmanifest` — Web App Manifest enabling Android Chrome **"Add to Home screen"** / desktop shortcut installation with standalone display and theme color (`#1e1b4b`).

Hosting on GitHub Pages

1. Upload all files in this folder (`index.html`, `styles.css`, `*.js`, `favicon.svg`, `favicon.ico`, `favicon-32x32.png`, `icon-192.png`, `icon-512.png`, `apple-touch-icon.png`, and `site.webmanifest`) to the root of your GitHub repository.
2. In your repository settings, go to **Settings** → **Pages**, select your branch (`main` / `root`), and click **Save**.
3. On your **PC**, bookmarking the page automatically uses `favicon.svg` / `favicon.ico`.
4. On your **Android phone**, open the page in Chrome, tap the browser menu (⋮) → **Add to Home screen** (or **Install app**), and Android will display the custom **myFinance** icon on your home screen.
